Summer (Virtual) Training

“Behavioral Science Principles for Practitioners”

Participants will get a general introduction to the field of applied behavioral science, including a selection of key psychological concepts, and will learn about how behavioral science offers novel approaches to program and policy design regarding issues like poverty and race. Participants will learn about ideas42's evidence-based design principles outlined in the Poverty Interrupted white paper, including examples of how the principles have been applied to real-world service delivery. Participants will also learn about evidence-based interventions in racial equity, from ideas42's work and the broader field. Participants will be prompted to reflect on how to apply these insights to their own programs, and will be given opportunities to ask questions of the presenters.

Concepts Covered:

Introduction to Behavioral Science
Poverty Interrupted: Designing for Scarcity
Behavioral Approaches to Equity

Watch for further details on cost, registration, and CEU availability.
