Data Quality - Chronic Homelessness
Measures percent of client records in project for which chronic homelessness cannot be
determined based on responses (for example, number of times and months homeless wasn't
answered). Chronically homeless clients are a particularly vulnerable population who it is
important to ensure we are accurately reporting.

Measure:	Data Quality - Timeliness of Data Entry					
Description:	Measures how quickly the project is entering client data into HMIS after the client enters the project. Timely data entry can reduce errors from too much time passing between data collection and entry, and it ensures data is accessible when needed. We advise projects enter data no more than 3 days after the client enters the project.

Measure:	Bed Utilization						
Description:	Measures the percentage of available beds in the project that were in use during the reporting period. This is measured by observing enrollments at a point in time during each of the four quarters in the reporting period, relative to the number of beds in the project. Higher utilization means the project is using more of its available resources at any given time, and more clients are being housed/sheltered.
